

# HOW TO: Sync Audio Books to MP3 Player, PDA, and SMART Phone

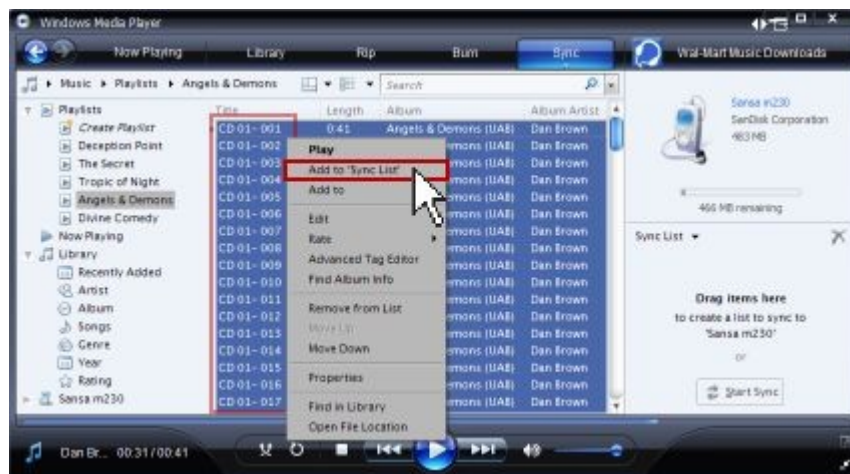

Is your MP3 Player, PDA or SMART Phone compatible? Please visit [PlaysForSure.com](http://PlaysForSure.com) or check the packaging of your device for the PlaysForSure logo.

NOTE: iPods are currently not compatible with our audio books so you will NOT be able to sync to your iPod. [Click Here for other iPod options.](#)

Once you have determined that your player is compatible with our content launch Windows Media Player 10/11 and then hook up your player to your computer. Windows Media Player will recognize your device and you should see a window appear (shown below). Simple click on '**Finish**' button to finish the device setup process.

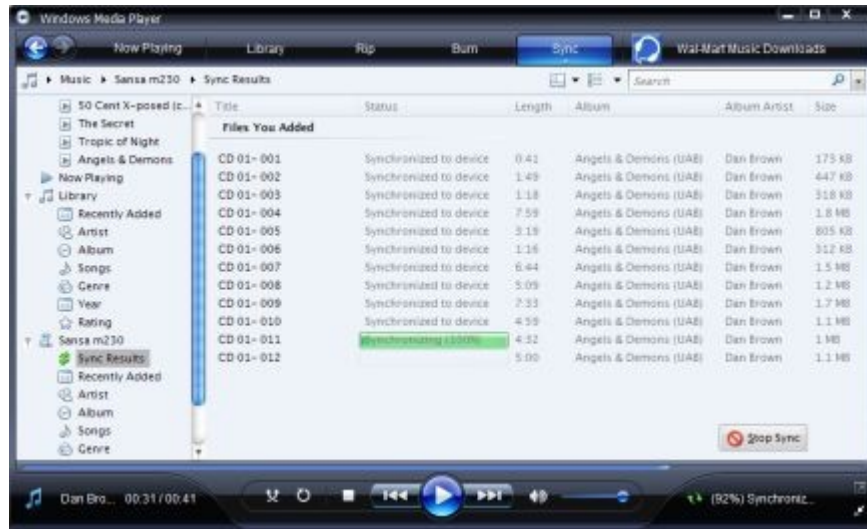

To sync an audio book to your portable player, in Windows Media Player, click on the audio book you wish to sync. It is best to transfer one CD at a time. Select the tracks for the first CD as shown in the picture below and **Right-Click** on your mouse, then click on '**Add to Sync List**'.

Once the files have been added to the sync list click on the '**Start Sync**' button in the bottom right corner of Windows Media Player to start copying the tracks to your portable

player. You will see each track being transferred to your device as shown in the picture below.

The sync process will be complete once you see all of the tracks with **'Synchronized to Device'** in the status column.

Title	Status	Length
<b>Files You Added</b>		
CD 01- 001	Synchronized to device	0:41
CD 01- 002	Synchronized to device	1:49
CD 01- 003	Synchronized to device	1:18
